PRESENTATION

This year is the seventh edition of our Sono-Elastography Meeting, which is a unique forum that brings together researchers from several countries.

Sono-elastography is an ultrasound-based imaging technique that has enhanced the diagnostic capabilities of clinical ultrasonography. This 7th edition of the Meeting is designed to address the most important topics on sono-elastography such technical advances, current clinical applications, guidelines on the use of the technique, and future prospects.

The general experience with sono-elastography is growing with time, thus we have built the meeting as an occasion to share current knowledge and advances in this field.

Sono-elastography adds valuable information to the study of all organs, potentially resulting in "a virtual biopsy". Because different elastographic modalities are available, our aim is also to help understanding which one is best suited for any given indication and which information can be obtained when using it.

The clinical applications and recent advances on sono-elastography will be analyzed with speakers coming from several countries and with the participation of commercial representatives.

We are looking forward to seeing you in Lecce and we will do our best to make this meeting an invaluable experience for you.
